

## 7 Reasons to Retire Legacy Healthcare Data to the Cloud

**1** Eases demand for IT resources

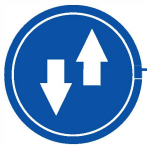

**2** Reduces CapEx and OpEx expenses

**3** Provides equal or stronger security compared to on premise solutions

**4** Quickly provision new archives and retire multiple legacy applications into a unified repository

**5** Easy to scale up or down as archiving needs change

**6** Permission-based access to a HIPAA compliant, secure environment housing encrypted data

**7** Gets you out of software and hardware maintenance to focus on patient care

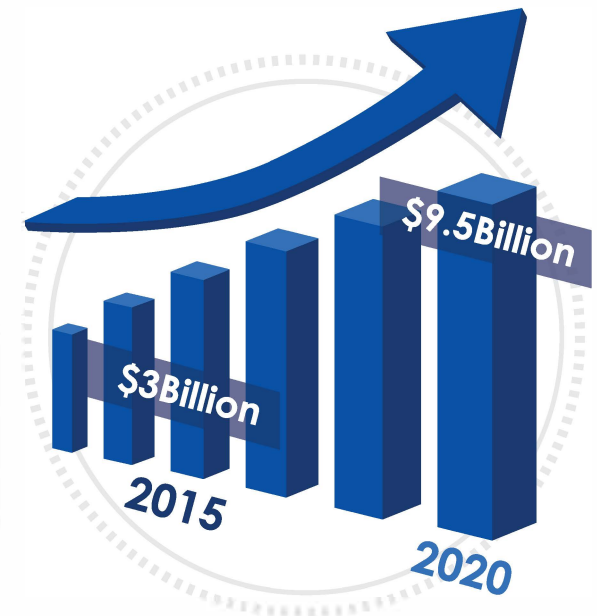

Healthcare spending on cloud services is expected to triple by 2020

- CloudTech News

"Hospital leaders are of the mindset that they prefer to be in the business of treating patients, rather than managing data centers."

- Health Data Management

With cloud-based solutions, organizations can stop fretting over the small stuff and start focusing on improving the big picture for their patients.
